## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

## **Listing of Claims:**

- 1. (original) A fabricating method of a semiconductor device comprising:
- (a) forming a film which to form a pattern on a structure of a semiconductor substrate;
- (b) forming an anti-reflection layer on the film to form a stacking structure including the film and the anti-reflection layer;
- (c) performing a plasma treatment to form grooves on an upper surface of the stacking structure;
- (d) forming a photoresist pattern on the stacking structure on which the grooves are formed; and
- (e) etching the stacking structure using the photoresist pattern as a mask to form a stacking structure pattern.
- 2. (original) The method of claim 1, wherein performing the plasma treatment includes performing the plasma treatment for 15-30 seconds using N<sub>2</sub>O plasma.
- 3. (original) The method of claim 1, wherein forming the photoresist patterin includes applying a photoresist layer, exposing the photoresist layer to a light selectively, and developing the photoresist layer to form the photoresist pattern exposing a part of the stacking structure.
- 4. (original) The method of claim 3, wherein a far ultraviolet ray is used as a light source in exposing the photoresist layer to a light selectively.
  - 5. (original) The method of claim 1, wherein a SiO<sub>x</sub>N<sub>y</sub> layer having thickness

of 200~300Å is used as the anti-reflection layer.

- 6. (original) The method of claim 1, wherein the film is a metal film.
- 7. (original) The method of claim 1, wherein forming the antireflection layer includes forming a protective oxide layer on the anti-reflection layer after forming the anti-reflection layer to form a stacking structure including the film, the anti-reflection layer, and the protective oxide layer.
- 8. (original) The method of claim 7, wherein the protective oxide layer is formed to have thickness of equal to or less than 100Å.
- 9. (original) The method of claim 7, wherein the plasma treatment is performed for 15-30 seconds using  $N_2O$  plasma.
- 10. (original) The method of claim 7, wherein a  $SiO_xN_y$  layer having thickness of 200~300Å is used as the anti-reflection layer.
  - 11. (original) The method of claim 7, wherein the film is a metal film.

Claims 12-20 (canceled)
